

ABSTRACT

A method and apparatus for managing the selection of location information sources (e.g., position determining equipment sites) to provide location information for a mobile communications unit (e.g., a cellular phone) are disclosed. Embedded within a request for location information on a particular mobile communications unit are one or more specifications regarding the quality of the requested location information. Such specifications is used to determine if any location information sources are able to provide the location information with the desired location information quality. Upon locating a location information source capable of providing the requested location information, the source is invoked to the particular location information source. Once the location information is provided by the location information source it is provided to the requesting party.
